

**REMARKS**

In the Office Action dated December 3, 2004, the Examiner required restriction to one of the following groups under 35 U.S.C. §121:

- |            |                           |  |
|------------|---------------------------|--|
| Group I:   | Claims 1-15 and<br>29-32  | Drawn to a method for emulating a network of two or more<br>distinct logic systems, class 709, subclass 224  |
| Group II:  | Claims 16-21 and<br>33-73 | Drawn to a method and system for enabling multiple<br>processor processing across physically distributed network<br>and translating an address indication, class 709, subclass 218                       |
| Group III: | Claims 22-24              | Drawn to a method of an emulation wall for connecting an<br>emulation subnetwork to an outside network and detecting<br>response datagrams to be transferred outside network, class<br>709, subclass 226 |
| Group IV:  | Claims 25-28              | Drawn to a method of countering attacks in a network, class<br>709, subclass 220   |

In response thereto, applicant elected group I, with traverse. In a subsequent Office Action dated April 20, 2005, the Examiner required further restriction to one of the following groups under 35 U.S.C. §121:

- |           |              |  |
|-----------|--------------|--|
| Group I:  | Claims 1-15  | Drawn to a method for emulating a network of two or more<br>distinct types of logic systems, class 709, subclass 224 |
| Group II: | Claims 29-32 | Drawn to a method of providing deception at a computer<br>system on a network, class 709, subclass 220               |

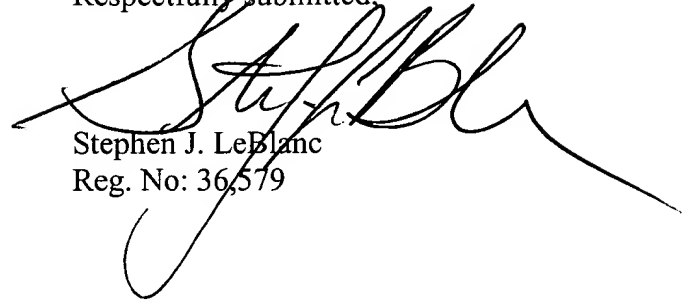

**In response thereto, applicant provisionally elects Group II, with traverse.** The basis of the traverse were outlined in Applicants previous election.

However, in order to expedite prosecution of this application, Applicants herein are amending the claims such that all of the claims have an undisputable relationship and are drawn to providing deception at a computer system on a network.
